## **CROSS CONNECTION CONTROL QUESTIONNAIRE**

Backflow prevention and cross connection protection is the responsibility of the customer as well as the water purveyor. Your cooperation is vital to the success of this important program and to protect the potable water supply.

Complete this form when making application for water service. This questionnaire will become part of the District's customer application record as required in the rules and regulations of the District.

Pursuant to and in compliance with California Administrative Code Title 17 and District Administrative Code Article 27, approved backflow prevention devices shall be installed when a potential hazard of contamination or pollution to the District's water supply exists.

Information required for the installation or testing of an approved backflow device may be obtained through the District's Cross Connection and Recycled Water Technician. The District may also request a questionnaire to be completed at a later date to confirm no changes have been made to the property plumbing system. Additionally, all installations are subject to inspection and regulation by the District.

Please answer all questions and sign the questionnaire.

Thank you for your cooperation.

Regards,

Jeff Nightingale  
Cross Connection and Recycled Water Technician
